

INNERSEAL™ DENSI-DYE

615-566-3065
www.WakefieldMfg.com

THE MOST ADVANCED COLOR SYSTEM EVER.

INNERSEAL DENSI-DYE is a vibrant concrete color dye system that internally seals, waterproofs, strengthens, densifies and preserves most concrete and cementitious surfaces. INNERSEAL creates a permanent moisture vapor barrier that becomes an integral part of the concrete and prepares the surface for a protective top coat.

- NON-TOXIC
- UV STABLE
- EASY TO USE

The color intensity of the **Wakefield Color System** is completely customizable from transparent to opaque based on the needs and desires of the customer. **All colors in this chart are shown on gray concrete at 75% color load with enhancing clear top-coat.**

The finished color of dyed concrete may be influenced by many factors including: concrete composition, age, preparation, lighting and type of top-coat used. This chart should be used only as a reference. **Actual samples should be made to choose final color. Printed color varies greatly with lighting. This chart is most accurate in natural sunlight.**
